Sharing the game without sharing the mobile phone

If we want to give access to an acquaintance or relative who can take the score for us, we can share it using the same app once the game is created.

First, we install the app on our acquaintance's or relative's device, then we open the game on our device.

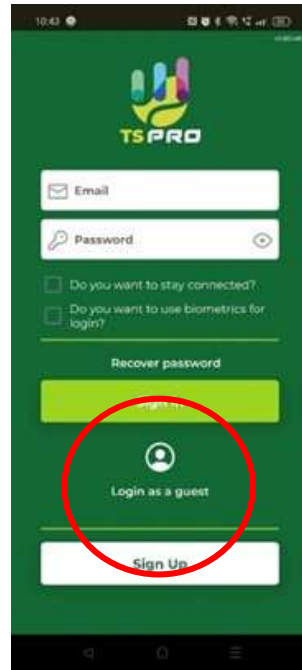

In the centre of the screen we can see a QR Code

Press the button and a QR Code will appear on the screen

Now let's move to the device we want to share the game with and open the application.

Without logging in, we press the 'Login as a guest' button and a screen opens where we frame the QR code visible on our mobile phone. Once framed on our acquaintance's app, the game will appear.
