Position of players on the field

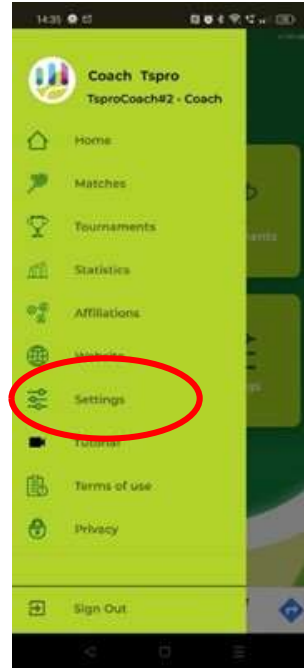

To indicate players' position on the court at the end of the point, and to get more accurate statistics, simply configure the "Player position" flag when creating the game.

In particular, indicating the position of the players makes it possible to correctly define the statistics of points won and lost at the net or at the back of the court. Alternatively, the system defines a pre-defined court position according to the type of shot.

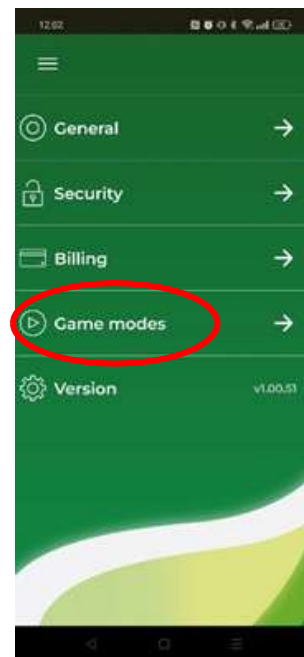

For this game, for each shot, after identifying the type of shot, it will be asked to indicate the position of the players

If you wish to use this configuration for all your matches, you can change your profile through the application menu by accessing the 'Settings' menu

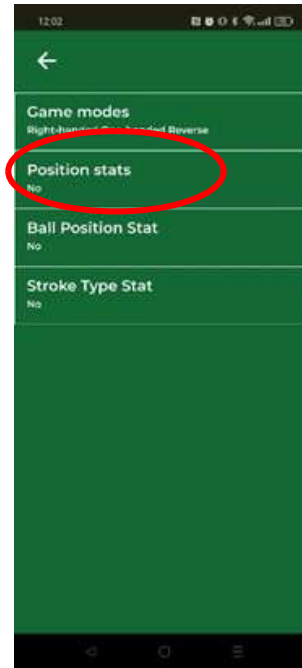

From which we will access the configuration menu of our profile, then proceed to select the 'Game Modes' button

From which we will access the game mode configuration menu, then proceed to select the 'Position Stats' button

By confirming the configuration change, the system will propose the flag set with the new configuration in the next match.
