Behavioural Statistics

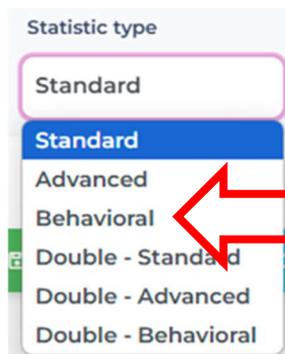

This statistic provides complete access to the games played and the player's behaviour during pressure points, both unfavourable and favourable. A pressure point indicates a particularly unfavourable or favourable playing condition. An example, in addition to break points, set points and match points, could be a score such as 0-30.

To access the statistics and in particular the Behavioural statistics, go to the following page from the Statistics menu.

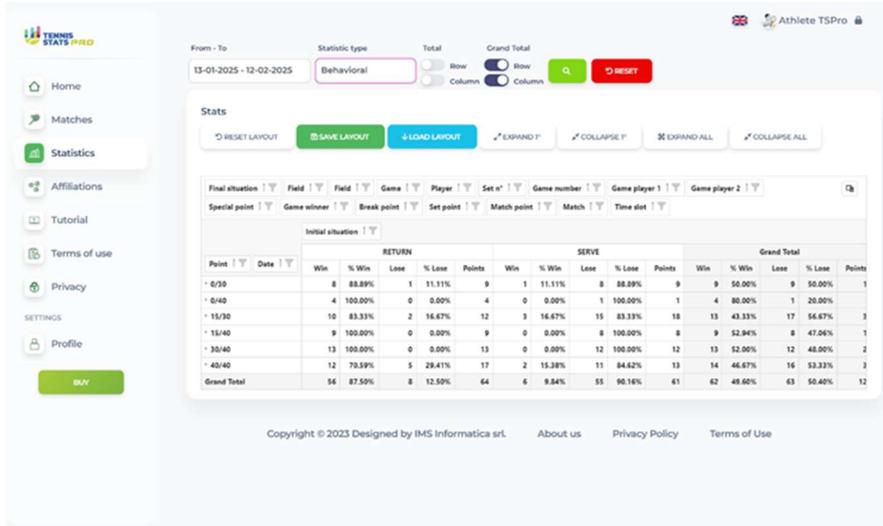

All types of statistics can be consulted from the main statistics screen.

To select Behavioural statistics, select 'Behavioural' from the drop-down menu.

As can be seen from the selection, the system divides the statistics between singles and doubles.

Select Behavioral and the following screen will appear.

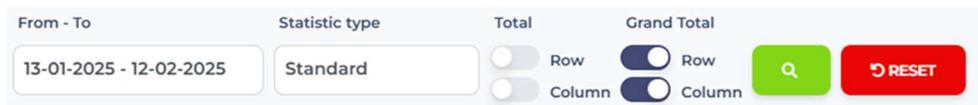

Some of the features described below may be chargeable or only available during the free period of use of the system

The screen is divided into several sections, starting with filters

Filters

Filters can be used to increase the analysis time of statistics and obtain more accurate data.

Remember that in free contracts the number of months available for statistics may be limited

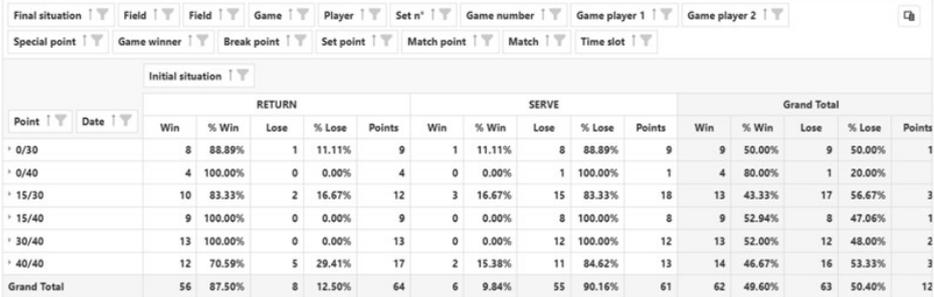

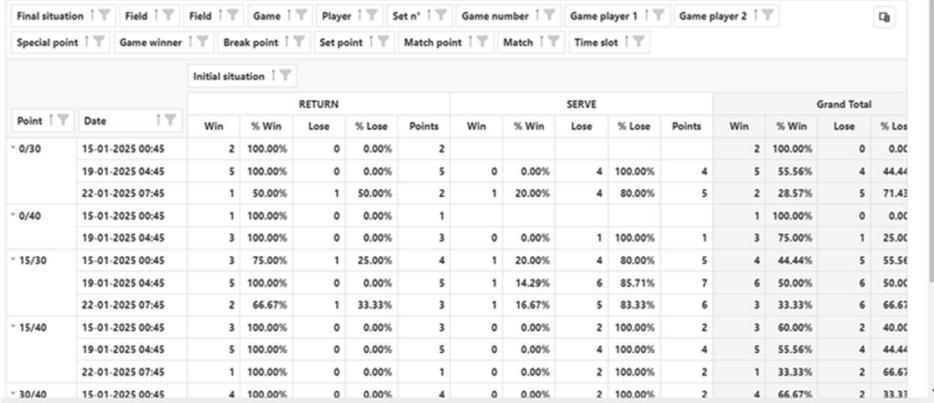

Period (From - To)	The main filter for statistics is the date. Changing the reference period and pressing the green search button will load the corresponding data
Statistic Type	Indicates the type and thus the data displayed in the report
Total	Indicates whether subtotals are to be displayed per measure per Row or per column
General Total	Indicates whether general totals of measurements per row or per column are to be displayed
Search (Green button)	Uses previously configured parameters to display the corresponding data
Reset	Restores default filter configuration

Commands

Commands help in data report management to perform operations in a simplified manner

Reset Layout	If changes have been made to the display of columns and/or rows, the system restores the initial display
Save Layout	If a change to the configuration of rows and/or columns is of particular interest, the current configuration can be saved in the system. Pressing the 'Save Layout' button saves the current configuration.
Load Layout	By pressing this button, the system will retrieve the last stored configuration
Expand 1st	<p>By pressing this button, the system will expand the row information of the first level</p> <p>Below you can see how the system expands the information in the first level</p>  <p>From basic to expanded visualisation</p> 
Collapse 1st	<p>By pressing this button, the system will collapse the row information to the first level</p> <p>Below you can see how the system compresses the information of the first level</p>

From compressed visualisation to fully expanded visualisation

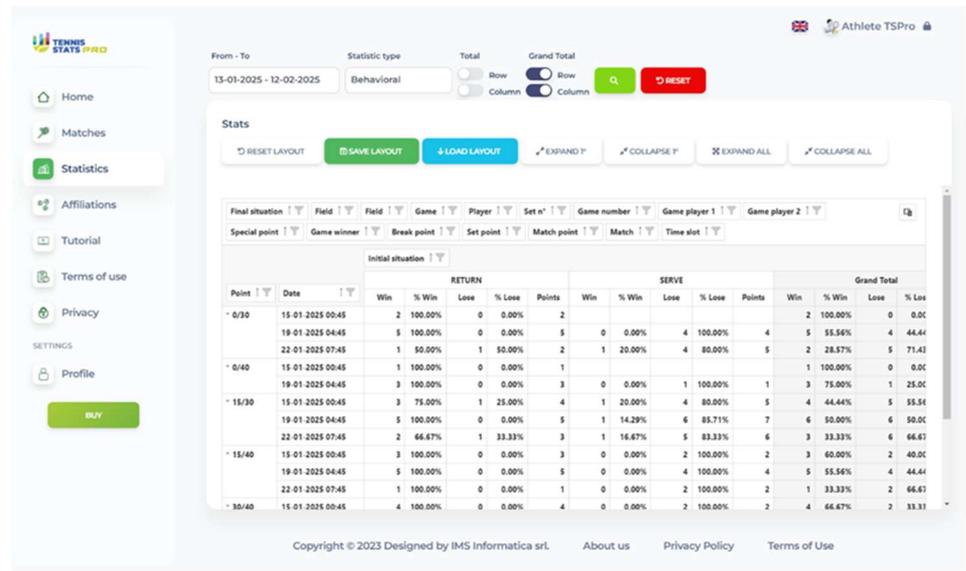

The screenshot shows the 'Stats' section of the Tennis Stats Pro application. At the top, there are filters for 'From - To' (13-01-2025 - 12-02-2025), 'Statistic type' (Behavioral), and 'Total' (Row/Column). Below these are buttons for 'SAVE LAYOUT', 'LOAD LAYOUT', 'EXPAND', 'COLLAPSE', 'EXPAND ALL', and 'COLLAPSE ALL'. The main content is a table with columns for 'Point', 'Date', 'Win', '% Win', 'Lose', '% Lose', 'Points', 'Win', '% Win', 'Lose', '% Lose', 'Points', 'Win', '% Win', 'Lose', '% Lose', and 'Points'. The table is currently in an expanded state, showing detailed statistics for multiple matches.

Collapse All

By pressing this button, the system will collapse all row information

Below you can see how the system compresses all the information in the statistics back to its initial compressed state

This screenshot shows the same 'Stats' section as the previous one, but the table is now in a fully compressed state. The columns are significantly narrower, and only the most essential data points are visible, such as 'Win', '% Win', 'Lose', '% Lose', and 'Points' for each match. The 'COLLAPSE ALL' button is highlighted in blue, indicating it was just used.

From expanded to fully compressed visualisation

Layout Management

In the 'Behavioural' statistics, the functionality of selecting values to be displayed in rows and columns is enabled.

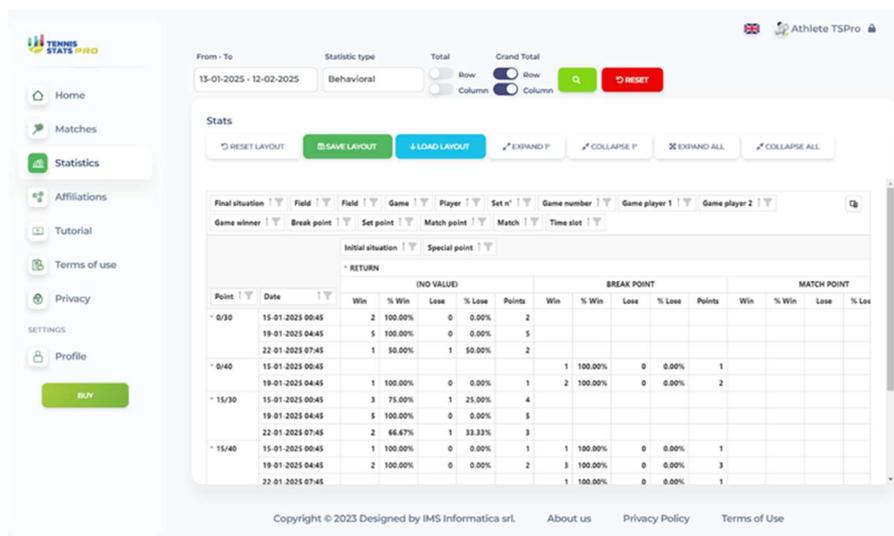

In the 'Behavioural' statistics, it is possible to change which information is displayed and the sorting of it. By moving a value from the top zone to the column or row zone, you can change the context of the statistics.

In the following screenshots we can see how you can drag a field into the column area with the mouse

Point	Date	RETURN					SERVE					Grand Total			
		Win	% Win	Lose	% Lose	Points	Win	% Win	Lose	% Lose	Points	Win	% Win	Lose	% Los
0/30	15-01-2025 00:45	2	100.00%	0	0.00%	2						2	100.00%	0	0.00%

The result is as follows

The screenshot shows the Tennis Stats Pro web application interface. It includes a navigation sidebar on the left with options like Home, Matches, Statistics, Affiliations, Tutorial, Terms of use, Privacy, and Profile. The main content area displays a statistics table with filters for 'From - To' (13-01-2025 - 12-02-2025) and 'Statistic type' (Behavioral). The table is titled 'Stats' and has various controls like 'RESET LAYOUT', 'SAVE LAYOUT', 'LOAD LAYOUT', 'EXPAND', 'COLLAPSE', etc. The table data is similar to the one shown in the first image, but with additional columns for 'Set n°' and 'MATCH'. The footer contains copyright information: 'Copyright © 2023 Designed by IMS Informatica srl. About us Privacy Policy Terms of Use'.

The combinations for analysing game information are virtually endless. Logically, it is possible to delete a field from both zones, even the default ones in the row zone.

Information

The following information is available:

At the row level, in addition to the following values, proposed by default

Point	Indicates the type of stress point being analysed;
Match Date	Day on which the match took place, you can add any of the available fields

You can add any of the available fields!

At column level:

- Win
- % Win

- Loss
- % Loss

To view all the information available in the report, use the scroll bar at the bottom of the data area

Point	Date	RETURN					SERVE					Grand Total				
		Win	% Win	Lose	% Lose	Points	Win	% Win	Lose	% Lose	Points	Win	% Win	Lose	% Lose	Points

Quick Filter

It is possible to use the quick filter to highlight a match or set of matches. Pressing the 'Funnel' button next to a column name in the rows section will open a selection where you can indicate a filter to the system.

The screenshot shows the Tennis Stats Pro interface with a quick filter dropdown menu open for the 'Set n°' column. The dropdown menu is open, showing options for 'Select All', '1', '2', and '3'. A red arrow points to the dropdown menu. The main table shows statistics for various matches, with the 'Set n°' column highlighted. The interface includes a sidebar with navigation options like Home, Matches, Statistics, Affiliations, Tutorial, Terms of use, Privacy, and Profile. The main content area has filters for 'From - To' (13-01-2025 - 12-02-2025), 'Statistic type' (Behavioral), and 'Total' (Row/Column). There are also buttons for 'SAVE LAYOUT', 'LOAD LAYOUT', 'EXPAND', 'COLLAPSE', 'EXPAND ALL', and 'COLLAPSE ALL'. The footer includes 'Copyright © 2023 Designed by IMS Informatica srl', 'About us', 'Privacy Policy', and 'Terms of Use'.

By setting, for example, the filter with only check 1 active, we will filter all statistics of the first sets of matches in the indicated range.

Filters are cumulative.
